Satvik Roots — Website Brief & AI Website Prompt

The direction I'd take for Satvik Roots is Black Marble × Liquid Gold × Satvik Luxury. Not a typical restaurant website with food cards everywhere, but a premium, cinematic dining experience that feels rich, rooted in Indian culture, and trustworthy.

1. Visual direction

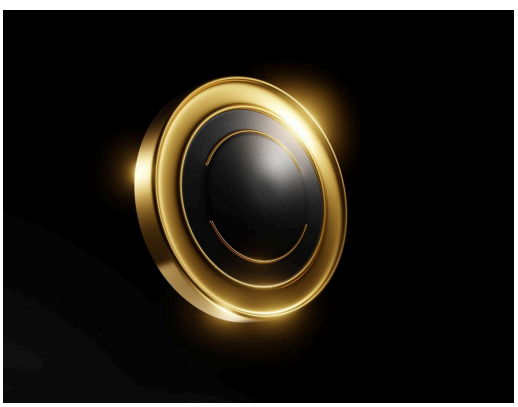

01. Background — Black Marble

Use your first reference as the main visual identity: deep black marble, smoky charcoal patterns, subtle grey veins and occasional fine gold mineral-like cracks. Keep the texture dark enough that text stays readable.

Suggested colors: `#080808` · `#151515` · `#292929`

02. Buttons — Black Metal & Gold

Use your second reference for the shape and finish. Buttons should look like polished black metal, with a glossy dark gradient, thin champagne-gold rim, subtle metallic reflections and a restrained gold glow. Think physical metal, not flat yellow UI.

Suggested colors: `#050505` · `#292929` · `#B99451` · `#F2D99A`

03. Food — Warm, Authentic & Appetising

Contrast the dark interface with vibrant, real food photography. Use warm natural light, fresh ingredients, traditional Indian serving details and close-up textures. The food should be the visual hero, not the marble.

2. Website concept

SATVIK ROOTS

PURE FOOD. ROOTED IN TRADITION.

swiggy.com

A TASTE OF TRADITION

Rooted in purity. Made with love.

Discover the warmth of traditional vegetarian food, prepared with care and served with a sense of home.

Explore the Menu ↗

Find Us

VISUAL CONCEPT ONLY · NOT THE LIVE RESTAURANT WEBSITE

The key is balance: 70% dark surfaces, 20% food photography and 10% gold accents. That keeps the website premium instead of making it look overdecorated.

3. Website structure

01. Hero section

Full-screen black marble background, elegant SATVIK ROOTS wordmark, oversized editorial headline, atmospheric food image and metallic gold CTA buttons.

02. Signature dishes

Premium image-led cards for chef specials, paneer dishes, tandoori starters, Indian breads and desserts. Add dish names and verified prices from the current menu.

03. Explore the menu

A clean, browsable menu with categories, vegetarian dish labels, search and clear pricing. Add an Order Online button linking to the restaurant's existing ordering platform.

04. The dining experience

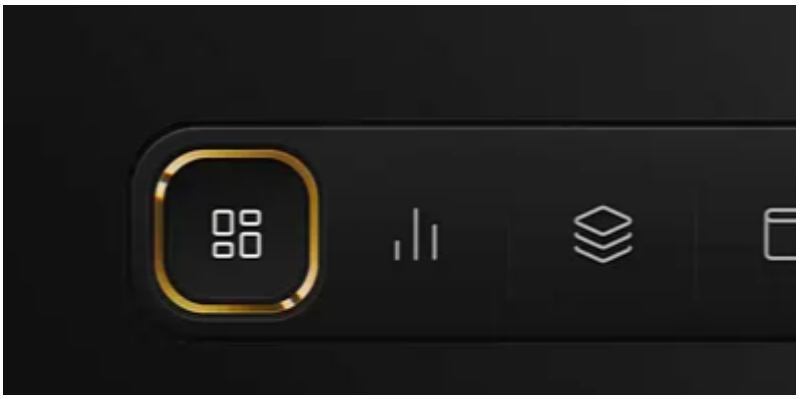

Restaurant ambience, hospitality, a photo gallery, location, contact information and a prominent Get Directions action.

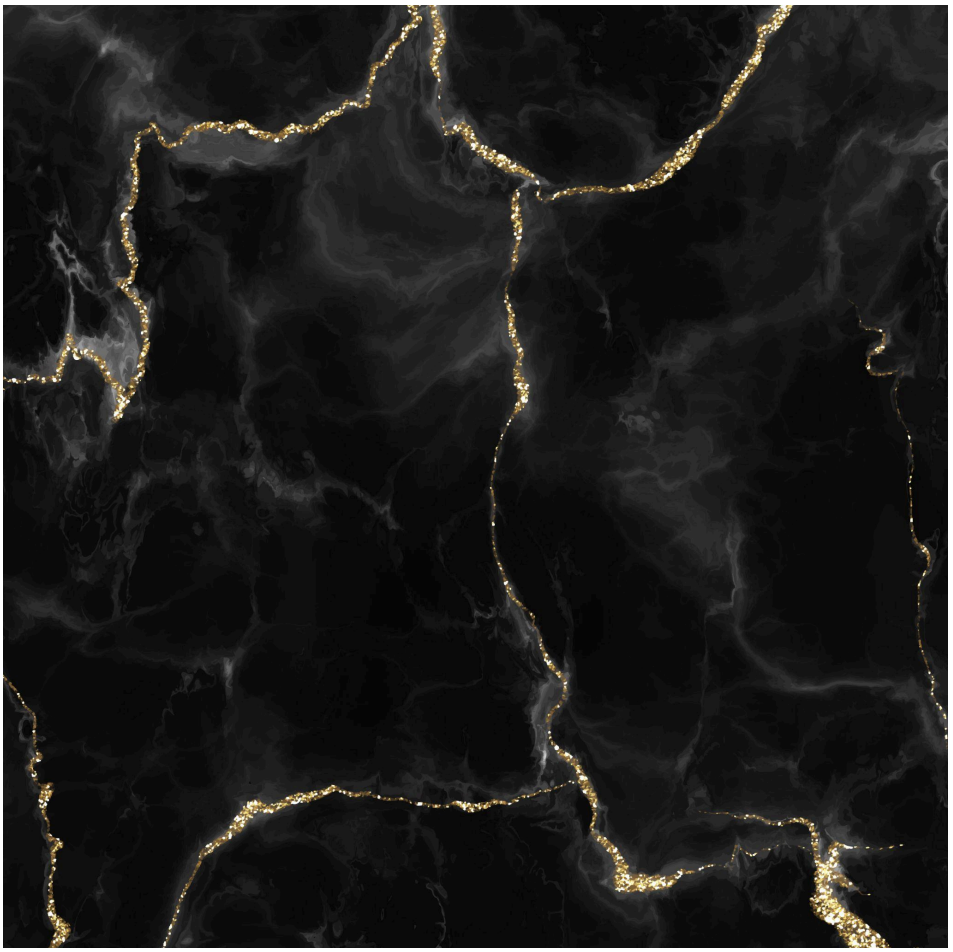

The existing Zomato listing identifies Satvik Roots in Talegaon as a vegetarian restaurant serving North Indian, Chinese, continental and other cuisines. It lists the address as Plot 289/290, Manohar Nagar, Talegaon, Pune, and phone number +91 78878 76518. Use these as starting references and verify them with the restaurant before publishing.

Prompts

PROJECT: SATVIK ROOTS — LUXURY LIQUID METAL RESTAURANT WEBSITE

Image reference to upload

Build a complete, production-quality, responsive restaurant website for **Satvik Roots, Talegaon, Pune**.

Restaurant reference: https://www.zomato.com/pune/satvik-roots-talegaon

Menu reference: https://www.zomato.com/pune/satvik-roots-talegaon/menu

The website must combine three distinctive visual elements:

1. **Black marble** with smoky graphite veins and subtle gold mineral fractures.
2. **Liquid black chrome** with flowing molten-gold reflections for buttons and interactive elements.
3. **Premium Indian food photography** that adds warmth, colour and appetite appeal.

The result should feel like a custom-designed luxury hospitality brand, with the material quality of a high-end automotive finish and the warmth of authentic Indian dining.

Do not create a generic restaurant template with a black background and gold text. Every visual decision must contribute to a cohesive art direction.

---

1. VISUAL IDENTITY AND DESIGN SYSTEM

Colour palette

Use these exact starting colours consistently throughout the website.

- Obsidian black: #080808
- Deep black: #0C0C0C
- Charcoal: #151515
- Graphite: #242424
- Metallic grey: #3B3B3B
- Champagne gold: #C6A15B
- Molten gold highlight: #E9D39A
- Dark antique gold: #806234
- Warm ivory: #F4EFE5
- Muted text: #AAA49A

Black must dominate the interface. Gold should appear as a material accent, not as a flat background colour applied everywhere.

Typography

Use an elegant editorial serif font for major headlines and a clean, modern sans-serif for navigation, menu items, body copy and controls.

Typography should feel sophisticated, spacious and intentional.

Use:

- Large editorial headlines with expressive line breaks.
- Small uppercase section labels with generous letter spacing.
- Comfortable body text with strong readability.
- Restrained gold typography for selected headings and labels.
- Warm ivory for primary text.

Avoid excessive italic text, decorative script fonts and oversized gold lettering everywhere.

Visual consistency

Create a reusable design system covering:

- Navigation.
- Primary and secondary buttons.
- Circular icon buttons.
- Menu cards.
- Section headings.
- Category filters.
- Form inputs.
- Gallery controls.
- Footer links.
- Focus and hover states.

All components must feel as if they belong to the same physical material world.

---

2. BLACK MARBLE BACKGROUND

Use the supplied black marble image as the visual reference for the site's background material.

The texture should contain:

- Deep obsidian-black stone.
- Organic smoky charcoal formations.
- Subtle graphite-grey veins.
- Fine, irregular champagne-gold mineral fractures.
- Natural variations in opacity and lighting.
- Realistic stone depth rather than a flat printed pattern.

The marble must feel photographic and premium.

Implementation requirements:

- Use an actual marble image texture wherever possible.
- Use dark overlays to protect text readability.
- Avoid obvious repeating patterns.
- Use CSS gradients only to enhance the texture, never as a substitute for realistic marble.
- Apply the texture primarily to the hero, selected transitions, story section and footer.
- Use solid charcoal surfaces in menu-heavy sections.
- Ensure the texture crops beautifully across desktop and mobile screens.

Keep gold veins understated. Do not cover the entire background in bright gold cracks.

Create subtle depth using layered backgrounds, restrained lighting and gentle parallax where performance permits.

---

3. SIGNATURE LIQUID METAL BUTTONS

This is the most important interactive design feature of the website.

Replace conventional buttons with custom **liquid black chrome and molten-gold buttons** inspired by polished automotive metal, liquid mercury, black titanium and flowing gold.

Do not settle for a normal black button with a gold border or a static metallic gradient.

A. Material and surface

Create a reflective black-chrome surface with:

- A deep obsidian base.
- Curved graphite reflections.
- Soft silver-grey specular highlights.
- Flowing champagne-gold reflections.
- Selective molten-gold highlights that appear to move beneath a polished metallic surface.
- Realistic contrast between bright reflected edges and nearly black areas.
- A subtle sculpted, three-dimensional appearance.

The material should look smooth, fluid and physically reflective.

Gold must resemble polished liquid metal, not yellow paint, glitter, neon or a flat gradient.

Avoid excessive glow, rainbow chrome, plastic gloss and cartoon-like liquid effects.

B. Button shapes

Create a coherent family of metallic controls.

Primary CTA buttons

Use sophisticated pill-shaped or softly rounded rectangular buttons for:

- Explore Our Menu.
- Order Online.
- Find Your Table.
- Get Directions.

The shape should remain elegant and proportional, with a clearly readable label.

Secondary buttons

Use darker black-chrome surfaces with restrained gold reflections and a quieter visual treatment.

Circular icon buttons

Use sculpted circular liquid-metal buttons for:

- Navigation arrows.
- Gallery navigation.
- Scroll-to-top.
- Small directional actions.

Use a refined metallic arrow symbol. Keep the icon crisp and centred.

Do not make every button circular. Use circular controls selectively, inspired by the supplied reference.

C. Liquid-metal animation

Create a convincing sense of moving liquid metal without making the interface distracting.

Default state:

- Deep reflective black-chrome surface.
- Subtle curved highlights.
- A restrained gold reflection along one edge.
- Minimal movement or a nearly static finish.

Hover state:

- A liquid gold reflection travels smoothly across the button surface.

- Black and graphite reflections shift subtly in response.
- The metallic edge catches a soft highlight.
- The surface appears to bend light like polished liquid metal.
- The label remains perfectly readable.

Pressed state:

- A subtle physical compression.
- A brief, restrained metallic light ripple.
- Smooth return to the original surface.

Focus state:

- A clear, accessible gold-accented focus indicator.
- No reliance on colour alone.

Mobile:

- Preserve the reflective material appearance without requiring hover.
- Use short, lightweight touch feedback.
- Avoid continuous animations that waste battery or affect performance.

D. Technical implementation

Build the effect using layered CSS gradients, pseudo-elements, radial highlights, masked reflective layers and animated background positions.

Use SVG filters or WebGL only if necessary and performant.

The reflections should feel organic and curved rather than like a flat line sliding across the button.

Create reusable components such as:

- LiquidMetalButton.
- LiquidMetalIconButton.
- LiquidMetalSecondaryButton.

Support variants for primary, secondary and circular controls.

Use CSS custom properties for the palette and animation timing.

Respect `prefers-reduced-motion`. When reduced motion is enabled, retain the metallic appearance while disabling unnecessary movement.

Do not use large video files or heavy 3D libraries solely for the buttons.

Quality target: A black liquid-chrome button with molten champagne-gold reflections, like a sculpted piece of luxury automotive hardware. The effect must look deliberate, refined and tactile.

---

4. NAVIGATION

Create a sophisticated, responsive navigation system.

Desktop:

- SATVIK ROOTS wordmark on the left.
- Menu.
- Our Story.
- Food.
- Gallery.
- Contact.
- Liquid-metal Order Online CTA on the right.

Use a transparent or dark marble navigation background at the top, transitioning to a deeper charcoal surface when scrolling if appropriate.

Keep navigation minimal and elegant.

Mobile:

- Wordmark.
- Circular liquid-metal menu control.
- Smooth, accessible navigation drawer.
- Clearly visible ordering and contact actions.

The navigation must work correctly on all screen sizes.

Do not use a generic oversized hamburger inside a bright gold circle.

---

5. HERO SECTION

Create a cinematic, full-width opening experience.

Use an asymmetric split-screen composition or a similarly refined editorial layout.

One side should contain the text and CTA buttons. The other should feature a substantial, beautifully lit photograph of Indian vegetarian food.

Background:

- Black marble texture.
- Deep charcoal shadows.
- Subtle champagne-gold mineral veins.
- Restrained cinematic lighting.

Headline:

“Rooted in Tradition. Crafted for Every Craving.”

Supporting copy:

“Discover comforting Indian favourites, vibrant flavours and a dining experience made to bring people together.”

Primary CTA: **Explore Our Menu**

Secondary CTA: **Find Your Table**

The primary CTA must use the signature liquid black-chrome and molten-gold effect.

The secondary CTA should use a quieter black-metal finish.

Include a small editorial eyebrow such as “A TASTE OF TRADITION”.

Add subtle entrance animations, carefully controlled background movement and restrained image transitions.

Make the hero immediately communicate food, warmth and quality. Do not allow the black marble texture to overpower the food image.

Do not put excessive text over the image.

On mobile, stack the hero naturally, retain strong visual hierarchy and keep both CTAs easy to tap.

---

6. SIGNATURE FOOD DISCOVERY

Section heading:

“A Taste Worth Returning For.”

Create premium, image-led dish cards with:

- High-quality food photography.
- Dish name.

- Short description.
- Verified price, if available.
- Vegetarian indicator where appropriate.
- Category label.
- A small circular liquid-metal arrow control.

Suggested categories:

- Indian Main Course.
- Tandoori Starters.
- Oriental Favourites.
- Continental Selection.
- Breads and Rice.
- Desserts.

Use actual dishes from the restaurant's published menu wherever possible.

Do not invent signature dishes, ingredients, customer favourites, awards or prices.

If exact menu details cannot be verified, create clearly editable content placeholders rather than presenting invented details as facts.

Photography should be warm, vibrant and appetising, with natural textures and sophisticated lighting.

Avoid making every card look identical. Use considered spacing, image proportions and editorial composition.

---

7. FUNCTIONAL INTERACTIVE MENU

Create a fully usable menu experience.

Include:

- Search field.
- Category filters.
- Responsive dish cards or a clean list view.
- Dish names and descriptions.
- Verified pricing.
- Clear vegetarian indicators.
- Loading and empty states where needed.
- A prominent Order Online CTA.

Reference:
https://www.zomato.com/pune/satvik-roots-talegaon/menu

Style the search field and category controls to match the black-metal visual system.

Active filters should use a subtle champagne-gold indicator rather than large gold-filled blocks.

Dish cards should use dark charcoal surfaces and restrained highlights, allowing the food photography to remain prominent.

The menu must be functional, not merely a static visual mockup.

Link ordering actions to the restaurant's actual ordering destination. Do not build a fake checkout, simulate successful orders or claim ordering integration works unless it has genuinely been implemented.

---

8. BRAND STORY

Section heading:

“Good Food. Good Company. Memorable Moments.”

Create a visually rich section using:

- Black marble or deep charcoal surfaces.
- Warm food and dining photography.
- Editorial serif typography.
- Fine gold accents.
- Generous negative space.

The copy should feel welcoming, authentic and food-focused.

Emphasise the pleasure of sharing a meal and enjoying familiar flavours.

Do not invent the restaurant's founding year, founder biography, family history, sourcing practices, awards or health claims.

Do not claim every dish is traditionally sattvik unless the restaurant confirms this.

Use verified information or clearly marked editable placeholders.

---

9. GALLERY AND DINING ATMOSPHERE

Build an immersive gallery with an editorial layout.

Include suitable images of:

- Food and presentation.
- Restaurant interiors.
- Dining ambience.
- Hospitality.
- Details that communicate the restaurant's atmosphere.

Use varied image proportions rather than a monotonous grid.

Add:

- Smooth hover zoom.
- Refined transitions.
- Accessible image controls.
- Optional lightbox viewing.
- Liquid-metal circular previous and next buttons.

Do not present unrelated restaurant or hotel photographs as actual Satvik Roots imagery.

If authentic restaurant photographs are unavailable, use appropriately selected food imagery and clearly avoid claims that it depicts the venue.

Optimise images and lazy-load those below the fold.

---

10. LOCATION AND CONTACT

Create a polished location and contact section.

Restaurant: Satvik Roots.

Address reference: Plot 289/290, Manohar Nagar, Talegaon, Pune.

Phone reference: +91 78878 76518.

Verify these details with the restaurant before launch.

Include:

- Address.
- Click-to-call phone number.
- Get Directions button linked to Google Maps.
- Zomato menu and ordering link.
- Opening hours only after verification.
- An optional map embed.
- A prominent contact CTA.

Use liquid-metal buttons for the main actions.

Keep the layout elegant and practical. Users must be able to find the restaurant or contact it quickly without navigating through unnecessary animations.

---

11. FOOTER

Create a cinematic footer with the black marble texture and subtle gold veins.

Include:

- SATVIK ROOTS wordmark.
- Short brand statement.
- Navigation links.
- Menu link.
- Contact information.
- Directions.
- Zomato link.
- Social media links only where verified.

Use refined typography, thin separators and restrained metallic accents.

Finish with a circular liquid-metal scroll-to-top button.

The footer must remain readable and uncluttered.

---

12. MOTION AND MICRO-INTERACTIONS

Use a coherent motion language across the website.

Include:

- Smooth scrolling.
- Subtle section entrance transitions.
- Gentle image zoom.
- Refined liquid-metal reflections on interactive buttons.
- Soft gold highlights.
- Restrained marble parallax.
- Smooth mobile navigation.
- Accessible focus states.
- Reduced-motion support.

Avoid:

- Constantly moving backgrounds.
- Excessive particles.
- Heavy 3D transitions.
- Large animation libraries without a clear need.
- Scroll hijacking.
- Animations that delay access to important content.

The website should feel premium and alive, never distracting.

---

13. TECHNICAL REQUIREMENTS

Build a production-quality, responsive website with a clean component architecture.

Requirements:

- Responsive desktop, tablet and mobile layouts.
- Reusable React components if using React.
- Consistent CSS variables and design tokens.
- Semantic HTML.
- Accessible keyboard navigation.
- Readable text contrast.
- Proper focus indicators.
- Optimised images and lazy loading.
- SEO metadata and local restaurant SEO.
- Correct page titles and descriptions.
- Functional navigation and menu filters.
- Working phone and map links.
- Appropriate loading, empty and error states.
- Reduced-motion support.
- Good Core Web Vitals.
- Lightweight animations.
- Maintainable code.
- No unnecessary dependencies.

Use real image assets and actual marble textures. CSS effects should enhance those materials rather than replace them.

Do not leave important controls non-functional. Do not claim to have connected external ordering services or verified restaurant data if that work has not been completed.

---

14. NON-NEGOTIABLE DESIGN RULES

1. Black marble, liquid black chrome and molten champagne gold are the core identity.
2. The buttons must look like reflective liquid metal, not standard buttons with a black-and-gold gradient.
3. Gold reflections should move organically across the surface, with restrained animation.
4. Food photography must provide warmth and colour against the dark interface.
5. The design must remain premium, legible and usable.
6. Avoid generic restaurant templates, excessive gold outlines, neon gold, plastic gloss and unnecessary glassmorphism.
7. Do not invent restaurant facts, reviews, awards, opening hours or prices.
8. Maintain strong composition, negative space and editorial typography.
9. Prioritise actual menu access, ordering, contact and directions.
10. Make the experience feel custom-designed for Satvik Roots rather than adapted from a generic theme.

FINAL CREATIVE TARGET

Create a memorable, cinematic restaurant website for Satvik Roots where black marble provides the foundation, Indian food photography creates warmth, and interactive controls feel like sculpted black liquid chrome infused with flowing molten gold.

Every major section must feel connected to the same visual world.

The defining detail is the liquid-metal button system: glossy black chrome, curved reflections, molten champagne-gold highlights and tactile interactions, executed with restraint and technical precision.

Build the complete website, not just a landing-page mockup. Prioritise visual quality, working functionality, responsive behaviour and an exceptionally cohesive brand identity.
